

Health and Safety in Mines Conference

2024 Please contact us to inquire about dates availability

- * Mine Health and Safety Act Legal Compliance
- * Accident Prevention and Elimination
- * Emergency Incident Management and Response
- * New Occupational Health and Safety Standard ISO 45001
- * Evaluation of compliance

Now, more than ever, it is imperative to ensure that mining employees, manufacturers and suppliers are **adequately trained in health and safety** to better understand the consequences of unsafe work practices.

The Mine Health and Safety Act has recently undergone numerous changes, with a “Draft Mine Health and Safety Bill 2013” waiting to be promulgated. These important changes require the **correct application** and **interpretation** and it is imperative that legal appointees are aware of the **consequences of non-compliance** to these laws.

The **law requires** that all reasonable measures must be taken to **reduce risk** as far as possible. It places a responsibility on all mining shareholders, from employers to all employees and even visitors to a mine, to identify risk areas and to do whatever is in their power to address the identified risk.

Understand how **workplace conditions**, **safety management systems**, **human error** and **leadership** affect the risk of **fatalities** and what companies can do to prevent **expensive stoppages**, **legal actions** and **serious incidents**.

During these interactive 3 days you will learn how to:

- **Understand** important **legal concepts** of the **Mine Health and Safety Act** and how this affect **legal appointees**
- **Understand** how the **new Mine Health and Safety Regulations** influences the industry
- Understand the **new Occupational Health and Safety Regulations** for effective compliance
- Respond to **legal proceedings** relating to negligent acts or omissions
- Understand the impact of **criminal liability**
- Adopt a **proactive approach** to health and safety
- Implement **risk assessments**, **incident** and **emergency response management systems**
- Develop required **action plans** to ensure continuous risk control
- **Measure outcomes** and evaluate Health & Safety Programs
- Understand future resilience of the mining industry - how to **adapt to the risks/negative consequences** and to take advantage of the opportunities arising from changes

WHO SHOULD ATTEND

- Mining Operation Managers
- Engineering Managers
- Plant Management Team
- SHEQ Managers / SHE Representatives
- Mining, Plant and Engineering Superintendents
- Supervisors (Mining, Engineering, Plant)
- Mine Service Departments (Geology, Rock Engineer, Environmental, etc.)
